Response to Arguments

1. Applicant's arguments filed on October 07, 2004 have been fully considered and are persuasive.

Allowable Subject Matter

2. The following is an examiner's statement of reasons for allowance:

Regarding to the claimed invention, the prior art of record fails to show or render obvious of a symbol timing synchronizer with data aided carrier phase, comprising:

I and Q insulators for respectively isolating the sampled inphase and sampled quadratur components of the sampled input signal for respectively providing I and Q signals;

Inphase and quadrature serial data demodulators for respectively receiving and filtering the I and Q signals for generating an odd and even filter responses, converting and sampling the odd and even filter responses into odd and even data, the odd and even data alternatively forming an estimate of the input data sequence;

I and Q error magnitude generators for receiving and filtering the I and Q signals, respectively generating and sampling the I and Q error magnitude signals;

I and Q mixers for respectively mixing the sampled I error magnitude signal with the odd data into odd error signal, and mixing the sampled Q error magnitude signal with even data signal for generating an even error signal, the odd data representing an odd sign of the I magnitude error signal, the even data representing an even sign of the Q magnitude signal; and

An oscillator means for generating the timing signal from the even and odd error signals, the timing signal for controlling the sampling of the I and Q serial data demodulators, and for controlling the sampling of I and Q error magnitude generators to generate the timing signal at a rate of the symbol sequence.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue
